

## Feedback for RRMP Research Presentation [Formative]

Tutor completing formative feedback: Karen Outram	Student number: Bee Teck Ivan Chua
Details of any extensions etc:	Submission Attempt: Formative

Thank you very much for submitting your formative Research presentation proposal on time.

If the subject you are using for the Research Proposal has any similar content to the Literature Review, please ensure that the Research Proposal is completely different from the Literature review to avoid any risk of self-plagiarising. And so all research/content needs to be fresh research as Turnitin picks matches.

If using acronyms, the first time you use them, ensure that you also use full words to reflect what the acronym means. You have to assume the viewer of your content knows nothing about the subject.

Ensure the research is focused with deep research occurring as you only have 15 minutes for your discussion.

**\*You cannot use primary research in this summative:**

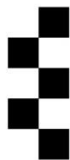

*The research questions will then be answered via an online survey using SurveyMonkey.*

**You cannot use primary research surveys in this summative. You can only use existing secondary research Literature,** [This is detailed on your unit 10 learning materials and I have spoken about this extensively in seminars]. Please do not send out, or use data gathered from people in this Research Proposal summative submission. You must only engage in primary research, [surveys, interviews etc with people] in the final module Capstone project. No primary research at all must occur in this module, as primary research requires complex ethics and ethical consent to be observed as part of study, and this aspect of ethics only occurs in the final Capstone module.

### ***Ethical considerations and risk assessment***

*The participant will be given all the relevant information about the study and is then asked to agree to participate. This information should include the purpose of the study, the nature of the data that will be collected, how the data will be used, and who will have access to it.*

*The Participants' consent will be required, and they should understand the risks and benefits of taking part in the study and that they are free to withdraw consent at any time.*

*To minimise intrusions on research participants' privacy (Privacy, anonymity, and confidentiality) (AERA, 2011, Clause 12.07).*

*Make sure your participants are treated equally, and the research benefits are distributed fairly.*

*Research should be designed, reviewed, and conducted under recognised integrity, quality, and transparency standards.*

*Maintaining integrity ensures the accuracy, publication and dissemination of research results and protects published evidence's integrity (Yip, 201).*

The above in italics is taken from your formative – once again I want to state do not use or engage with primary research in this summative. Primary research [with people/participants] can only occur in the final Capstone project.

Noted in your timeline table, you are reflecting a plan for the dissertation , [capstone project] if primary research is planned for that you can discuss that in your Research Proposal summative, you just mustn't gather any primary research data or use it for the Research Proposal summative, [only existing secondary literature can be used for Research proposal summative].

With best wishes

Karen
